

Data Skills and the National Innovation Centre for Data Steve Caughey **Director of NICD**

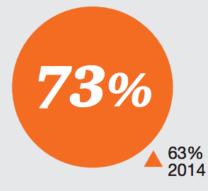

Data Skills Problem

HOW A SKILLS GAP IMPEDES THE USE OF NEW TECH

BIG DATA

THE SKILLS GAP: Big Data

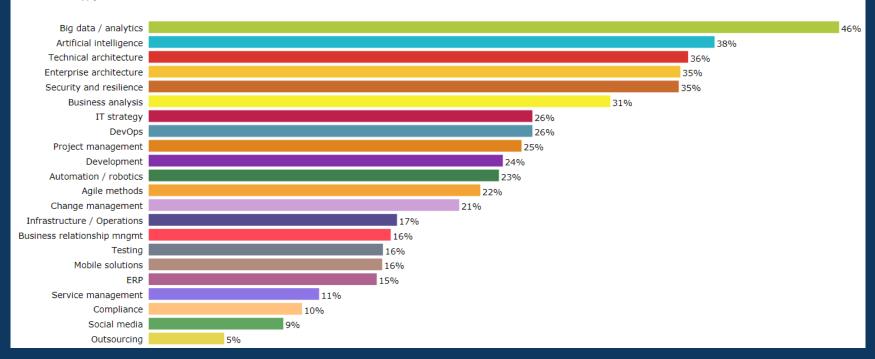

90% of decision-makers say big data is relevant to their industry. 66% say they don't have the skills to implement big data.

CIO INSIGHT

Which functions do you feel suffer from a skills shortage?

Select all that apply

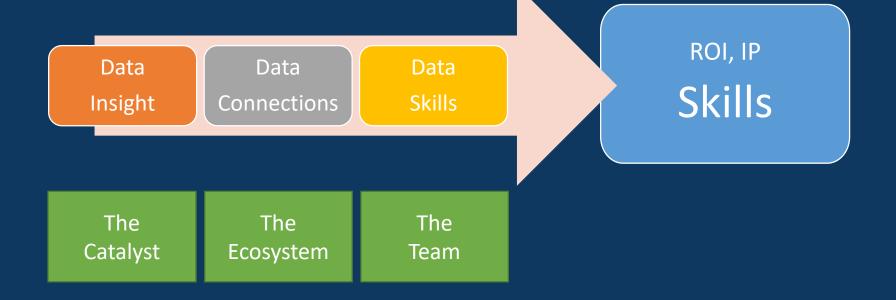

National Innovation Centre for Data

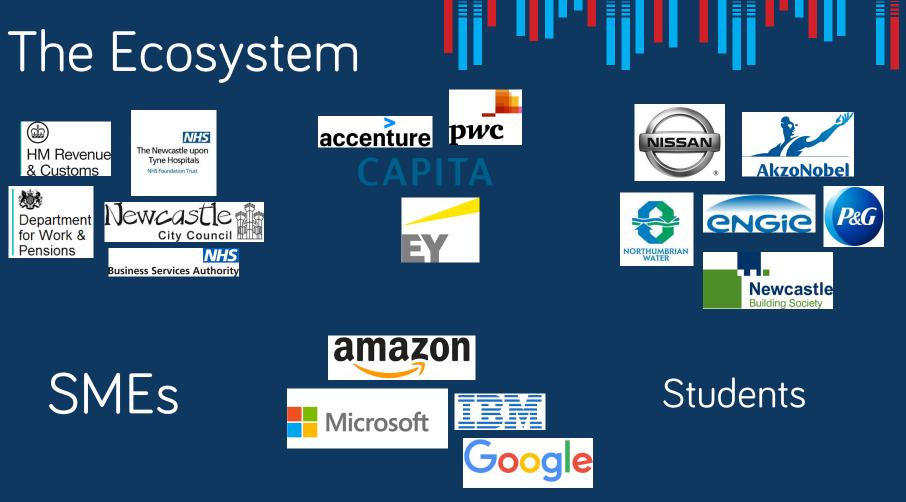

- £30M Investment in data
- £50M Building
- A unique facility bringing together the public and private sector, University researchers and students together to enable organisations to extract value from their data.

NICD provides organisations with the skills they need to obtain actionable insight by upskilling their own people on their own platforms using their own data.

NICD Summary

- A Beacon for data innovation
- World-class facilities and services under one roof
- Delivering next generation skills
- Delivering impact through innovation

Recommendations

- Audit and connect existing data skills
- Explore your data needs (seek independent advice)
- Get management buy-in
- Pick low-hanging fruit
- Upskill your people (look at Data Science MScs)
- Be cautious with IT

Case Study

"We've taken the business on an important journey. It's not just about the revenue. The excitement is in taking the whole management team on that journey by showing them the prototypes, and explaining what we can achieve if we're open to it."

Marcin Lisowski – Head of Data Analytics – LKQ Europe

"The ability of the whole team to deliver against the vision has been stupendous. All of the various elements came together in alignment. NICD, ourselves, and everyone involved should be very proud."

Alan Timothy – Project member, and Chief Scientist – Profile Analysis

Shortlisted for Outstanding Big Data Industry Project at Computing's 2018 Big Data Excellence Awards
